

8 Way Thinking

8 Way Thinking combines Multiple Intelligence theory and inquiry-based learning. It translates the eight intelligences into student-friendly language (Mathematical – Numbers, Musical – Sounds, Spatial – Sights, Kinesthetic – Actions, Interpersonal – People, Intrapersonal – Feelings, Naturalistic – Nature, Linguistic – Words), giving students a template to develop their thinking. It's can be applied to any theme that children are learning about. All students have to do is think of a question related to whatever the central theme is and then use the 8 Way angles to help guide their questioning. An example of how this model can be used is available [here](#).
